APPLICATION OF LMS MOODLE IN THE LANGUAGE TRAINING PROCESS OF MILITARY SCHOOL CADETS

Sovhar O.M.
Hetman Petro Sahaidachnyi National Army Academy, Lviv

In today's conditions, teaching and learning related to the information environment and novel educational technologies of distance and electronic learning is becoming more and more widespread in educational institutions of Ukraine. The ability of cadets to master a foreign language can be optimized by organizing the educational process as an integral system of a well-thought-out and methodically prepared educational information environment using real and virtual means. The choice of these means is determined by the purpose and tasks of foreign language learning in a military institution, the initial level of cadets' training.

In the national educational content, global trends aimed at the accessibility and flexibility of education are presented, in particular, in the Hetman Petro Sahaidachnyi National Army Academy along with traditional learning technologies, distance learning has also been introduced. This approach to learning involves both direct-contact form and online classes, among others, on the LMS Moodle platform, the use of which is aimed at supporting the educational process.

The use of technologies of this system allows cadets to build their own strategy to learn the discipline and helps not only to acquire knowledge, skills and abilities, but also to form a certain structure of personal qualities. The study of the conditions for the formation of professional competence of future specialists by means of network technologies made it possible to establish that the introduction of an educational and methodological complex, which includes distance courses developed by means of LMS Moodle using a modular approach, presentation of knowledge as a dynamic, multimodal structure, in the formation of which all participants of the educational process take part, contributes to independent acquisition and updating of professional knowledge, personal involvement in this process and responsibility for it.

The LMS Moodle provides cadets with:
- access to educational materials, testing tools;
- tools for group work (Wiki, forum, chat, seminar, webinar);
- the possibility of reviewing their achievements;
- the ability to review test results;
- the possibility of communication through personal messages, forum;
- the ability to download files with completed assignments;
- the possibility of using reminders about events in the course.
